

« Meeting between two experts in terraces »

30 years of experience and expertise in the field of snow removal and heating in SELV (Very Low Safety Tension), Ultra-fine, ecological and economical ... THERMALU designs and innovates in radiant heating solutions.

Balcony construction system which includes frame, floor and all aluminum finish. Revolutionary in several respects: it is extremely durable, ultra light, easy to assemble, non-slip, maintenance-free ...

Manufacture 100% Europeen

100% Canadian Manufacturing

## Positioning

For all types of terraces and stairs, requiring frequent snow removal or heating, heating blades provide a solution for heating and snow clearing by the ground. By combining aluminum and low-voltage heating tape, our product has the particularity to respect the environment and brings comfort and economy.

## Product

By installing a heating strip for snow removal in the deck boards and two heating strips for heating, we offer a better alternative to the demand and the current need.

The coating of the aluminum blades can be adapted as required. At the moment are available in 4 colors: wood finish (gray and brown), gray and beige.

## Avantages

Economic

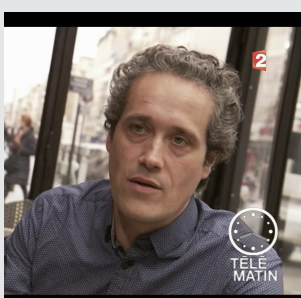

Healthy and ecological

Aesthetic

Clean

Sure

Convenient
