

## Guidelines for aluminium decking

### Guidelines to keep your aluminium decking looking like new:

- Regularly rinse with water to remove dust, salt residue or other light accumulation.
- For more tenacious stains, use a pressure jet to remove.
- You can use ecological melting salt in winter. It is suggested to not let the salt accumulate on the surface to avoid staining.
- Avoid having leaves accumulate on the surface. Clean off regularly.

**NOTICE:** *Never leave a carpet on the floor / If you have flowerpots, we suggest moving them regularly to avoid dark circles stains.*
